DR. DANIEL CLARK

Upper Cervical Patient Education Made Simple

Upper Cervical Corrective Health Care

Surprisingly different ... Undeniably effective

The Upper Cervical doctor's objective is to help each patient maintain perfect head/neck alignment ...

... so there is no interference in the flow of brain health and healing messages to the body.

The Upper Cervical Doctor's Objective

All Upper Cervical doctors have the same objective, regardless of the corrective procedure they choose to use; Restore head/neck alignment to remove interference at the top of the neck and reactivate the efficient flow of brain health and healing messages to the body so it can begin its natural self healing process.

Then help each patient maintain their alignment correction so there is no interruption in the body's self healing process until it is completed.

Provide "maintenece care" with periodic head/neck alignment and body balance checkups so patients can enjoy a better quality of life. (Preventive Health Care)

Interference

No Interference

Brain health and healing messages leave the brain by way of the brain stem, pass through the neck, down the spinal cord and out over the entire nervous system to all parts of the body. These messages control, maintain and monitor all body functions. They also provide for body healing.

Restricted flow of brain messages to the body, due to misalignment interference at the top of the neck, may be the Root Cause of countless health problems, because so many different health problems have responded to the Upper Cervical Corrective Procedure.

+++++

If you believe God, creator of the universe, enabled his son Jesus to walk on water, heal the sick, cause the blind to see, turn water into wine and created man in his own image ... surely you don't believe he intended for man to have a medicine cabinet full of pills and painkillers in order to stay well and enjoy optimal health.

Our Objective:

Describe Upper Cervical Care so it is logical and easy for patients to explain to family and friends!
